

NO MERLINE, NOR MERCURY:

But a new

ALMANACK

After the Old Fashion, for the
Year of our Redemption,

1 6 4 8.

Being the Bissextile or Leap-yeare,
and from the Creation, 5597.

Containing a compendious
Chronology of all the Battles,
Sieges, and other remarkable Con-
flicts, which have happened in this Kingdom,
since the beginning of these unhappy
Troubles; with other Notes necessary
for such a Work.

Calculated and composed for the
Latitude and Meridian of the famous
Burrough of Kirkby-Kendall in the
County of Westmorland.

By Capt. George Wharton, student
in ASTRONOMY.

Verbum & Opera Jehova meditabor.

Printed for the Author, in the Year 1648.

TO the READER.

Had not confined my selfe to this narrow limit any more, but that the importunity of some (honester then others) of the Company of Stationers prevailed with me for this year. And indeed I was hereunto the rather induced through the hopes I had of having it printed by their means without further hazard of the Printer: (for, as for my selfe, I never feared old plundering *Whittaker*, nor any of his Fellowes.) And to the intent it might not meet with any rubs, I was content to passe over the failings of my two Antagonists, *Booker* and *Lilly*, in silence, without mentioning either of them; notwithstanding all their former provocations: And having collected my Notes, and disposed them much after this sort, (yet not completed the Book) I was desired to shew it to some of the Company; which was accordingly done by a Friend of mine, and interestted in some bodies hand for certaine daies upon Promise of returning it to be perfected: but in stead thereof, it was fraudulently kept, and humbly presented to M^r *Booker* by one *Partridge*, whose face I know not, (for I could never see it for his nose) and betwixt them it was detained, and left to the pleasure of my professed Enemy, to alter, adde, or expunge what he would: Upon notice whereof, I was advised to prepare another Copy for the presse, which (in case the former were abused by that club-fisted-fellow *Booker*, and so published imperfect) should give satisfaction to my Friends, who might otherwise be deluded with such trash as my Enemy should please to insert, or want other things which his malice might raze out and concale. Wherefore, if any other then this shall chance to be published in my Name, I doe absolutely disclaim it, as not being perfected by me, nor any for me. And I am confident I shall finde once an opportunity to requite that bloud-bound *Partridge*; and *Booker* too, who might

TO THE READER.

might have gained more credit in answering of my *Belium Hybernicae*, &c. then in this his under hand dealing. But I presume that by this time he is sensible of his Errors: for I have not heard one word from him since; and the daily proceedings of the Irish, &c. have verified my Predictions, and frustrated his. As for Mr. Lilly, I dare say for him, he will not assume that height of impudence, as to deny that I have truly discovered and corrected his failings both in my *Prog.* 1647. and in *Melini Anglica Errata*; or that he remains yet unconvinced in his judgement. And for the Event of things, time will clearly decide the controversie. As touching his scurrilous language belched out against me in his Epistle to the Reader, of his Pamphlet called the *Worlds Catastrophe*, &c. I value it not, nor doe I accept of his railings for reasons: His calling of me Traitor, Renegado viper, Ignoramus, Irish-wolfe, Ideot, and the like, render him not one jot the better Artist. I could (with a little help) return him as quaint Epithets, and very pertinent to his profession; but I never delighted in such language; and it shall satisfy me that I have made him so foame and froth at the mouth, as that his best friends suspect him of the Falling sickness. He saies he hath no time to answer that *Alinogogabond*, (as he termes me) in minutes and crotchets: But does not every Artist know, that one minutes error in the Suns place, begets twenty foure minutes error in time? And because he would make men believe that he purposely neglects such scrupulositie in his horary Questions and Ingresses, because, (as he saith) a few minutes can breed no error in judgement, doe but examine the places of the Planets in those Nativities which hee hath published, and you shall finde him as Erroneous as in the rest. I'll instance but one: The Place of the Sun (who is Hyleg) in the Nativity of King *James*, printed in his Englands Propheticall Merline, pag. 19. is very erroneously calculated. For examine it thus (*Ex tabula Richeliana*) to the time by him given equated and reduced.

Longi.

To the READER.

	Long. \odot	Apog. \odot
	S. d. m. s.	S. d. m. s.
<i>Anni compl. 1565</i>	9. 19. 27. 14	3. 5. 8. 12
18. <i>Jun.</i>	5. 16. 34. 28	29
<i>Hor. 21</i>	51. 45	
<i>Min. 24</i>	59	
<i>Media Solis long.</i>	3. 6. 54. 26	3. 5. 8. 41

<i>Vernus Solis Locus</i>	3. 6. 50. 43	in \odot 6. 50. 43

So you see that the Sun is precisely in the 6. degr. 50. min. and 43. seconds of *Cancer*: And Mr *Lilly* hath put him but in 6. degr. 44. min. which is almost 7. min. different from the truth. And therefore this Ephemeris man is not only guilty of idleness and neglect, but of impudence and ignorance, whilst he hath the face to perswade us that his Errors are but his known and willfull omissions; when, on the contrary, in those Schemes, wherein he acknowledgeth all exactness that may be requisite, his faults are most obvious. I have no room here to insert any more of this nature, nor to make answer to those Interrogatories of his Epistle; but I shall promise him a seasonable Collection of the Errors of his Starry Messenger, and shew him the folly of the Postscript attending it, and teach him the grounds and verity of my Predictions, &c. and why I pronounced a good journey to His Majesty in my *Prognosticar.* 1649. whilst the Presbyterians kept Him Prisoner at *Holmby*: and why I said the Irish would be victorious, &c. and I shall demand of him why he pronounces destruction to the *English Monarchy*, &c. and publickly maintained that the King should never come to *London* again, &c. I shall dispute with him concerning the Government of the World by Angels, &c. and I shall ask him how he became

To the READER.

became so empty and indigent, as to be beholden to a
poore sneaking Pedagogue for a railing sheet of non-
sense against mee. I shall examine that fellows Arith-
metick too, and teach him what it is to Row in my ves-
sel. And I shall aske Mr *Lilly* what Authority he had
from that Idiot of *Arlston* for those Epithets prefixed
my name, throughout that scabbed piece of his (for they
were not sent out of the Countrey ;) and why he calls
himselfe and *John Booker*, *The famous Prolomies of*
this Nations, when (alas good men) *Ptolomy* may be
something to eate for ought they know. I shall like-
wise examine the severall Branches of his Profession,
touching stolne goods, &c. I will unfold the mystery of
the Lady M. Dog, and how he came to tell Mr *Barton*
his wounds, &c. I shall desire to know why he was at so
much charge and trouble in procuring warrants from
Mr *Corbes* against me, and imploying so many spies
and spurious fellows to finde me out whilst I was in
London, when (if hee had the skill he pretends to) hee
might have discovered me by his Cabalisticall Art. But
a *Cheat* he is, and a *Cheat* I shall make him appeare to
be, to the eyes of every one that have had any dealings
with him ; In the *interims*, I advise all men to forbear
him, and keep their money in their Purfes, for 'tis that
he onely aimes at, and little else they shall find in him.

Farewell.

Advent Sunday Dec. 3	Domin. Advent. Novemb.

C H A R L E S our gracious King began His Reign over Great Britain the 27. of *March*, 1625. and hath reigned 23. years compleat the 26. of *March* this year 1648. but the 27. is Initium Anni Regni 24.

Vivat in æternum Rex C A R O L U S, quem Deus nunc, & in secula seculorum defendat, ora.

V E N U S is Orientall, or our bright morning Starre, from the beginning of the year untill the 4. of *September* following; on which day she beginneth to be Occidentall, or our glittering Evening Starre, continuing so untill the end of the year.

The contents of the several columnes
in the following Kalendar.

IN the first you have the dayes of the
Moneth.

In the second the dayes of the Week.

In the third, the beginning and ending of
the 4. Terms, the moveable and fixed Feasts,
and the names of divers old Saints; all which
are recorded to good and profitable purpose:
as, *The Annunciation of our Lady, The Nativity
of our Saviour*, and the like, which are appointed
by the Church to be kept holy. Others,
(such as *Cuthbert, Martin, Hilary, Thomas Becket,*
&c.) because the principall Martys and Faires
kept here in England are by them distingui-
shed, and the Dates of old Evidences thereby
the better discovered, and not for any super-
stitious use, as the ignorant suppose.

In the fourth, the Signe and degree that the
Moon is under for every day.

In the fifth, the most notable Aspects of
the Planets, with the naturall inclination of
the Aire, &c.

In the blanck Page, a brief Chronology of
all the memorable Battles, Sieges, and other
Conflicts which have hapned since the begin-
ning of the late unhappy warre, noted against
the day of the moneth whereon they hapned.

The 2. last columnes of the blanck Page,
the Rising and Setting of the Sun at *Kendall*.

At the Head of these Columnes, you
have the Change, Full, and Quarters of the
Moon, for every Moneth.

January hath xxxi. dayes.

Left Quarter the 7. day, at 4. and 52. min. in the morning.
New Moon the 14. day, at 6. and 24. min. afternoone.

the Eclipses this present Year,
1648.

OF foure Eclipses happening this Yeare,
there will be but one visible in our He-
misphere.

The first will be of the Moon upon the 26.
May, according to our Account, but the 5.
June, after the Roman Account. This E-
clipse will be but a small one. It happeneth
5. min. after our high-noon in the Meri-
dian of Kendall, but cannot be seen of us; for
the Moon is then under the Earth: But those
that inhabite 11. hour. 54. min. 31. sec. more
Easterly then we, in the Longitude 201. degr.
3. min. (such be the People who live in the
Kingdom of *Anjan*, in the outmost part of *Me-
xicana*, in *oppido S. Trinitatis*, &c.) and all such
be our *Antipodes* and *Periceci*, (as they are
who live in the Islands of *Salomon*, in *Insulis
de la Agnada*, non procul à *nova Guinea*, & *Me-
xicana* in *Quivira*, extremitate *Occidentalis Me-
xicana*, &c.) shall behold this Eclipse in their
very Meridian, for it is midnight to them, when
it is noon with us, and mid-night to us, when it
is mid-day with them. The Digits darkned
will be but 4. and 36. min. The Sun being
then in the 15. degr. 14. min. 41. sec. of
Gemini, and the eclipsed body in the 15. degr.
14. min. and 41. sec. of the Opposite Signe
Sagittary.

Another

Wharton, 1648.

Another (almost total) Eclipse of the
will be upon the 11. day of *June*, but it
not be seen in *England*; for the apparent
of the Conjunction is at 32. min. and 30.
after our midnight, when both the *Luna*
ries are under the Horizon; so that it will
peare to them of *Quivira*, and to such as
joine to the Strait di *Anjim*, ali *sq. virginia*
nobis incognitis. The Digits eclipsed are
min. 23. and the continuance 2. houres
an halfe.

Of the Eclipse of the Moon visible
in *England*.

THIS may be observed by us at *Kendall*
(the aire be cleare) upon the 20. day
November, according to the English Account
but the last day of *November*, after the *Roman*
Account, at 6. a clock 25. min. and
sec. in the Morning; for at that moment will
the Moon be obscured to the quantity of 9
Digits, 5. min and 52. sec. the Sun being then
in the 8. degr. 45. min. of *Sagit.* and the Moon
in the 8. degr. 45. min. of the opposite Sign
Gemini.

The beginning of this Eclipse will be at
a clock, 38. min. and 48. sec.

The end at 8. a clock, 11. min. and 22. sec.

So the continuance thereof will be 3. houres
32. min. and 34. seconds.

 am Chili, Floridam Mexicanæ, Civitatem Chague, &c.
 shall behold this Eclipse in their very Meridian.

Figura Eclipsis.

rogatives, or dignities in the degree eclipsed, in the Angle following the Eclipse (considering them only in respect of House, Exaltation, City, Terme and Decade) for that Planet shall be the Ruler and Moderator of the Eclipse, which the Greeks doe (Metaphorically) call Acta, but the Arabians Almuten, which is as much as Vantage, or Surmounting; and is therefore termed Lord. And although Picus Mirandula derided all Astrologers of his time, saying, Quoniam pastorum Astrologi vera prædicere possunt, quum in translatione Arabica habeatur Anguli præcedentis, & Ptolemy scripserit sequentis? yet he quite mistook the Text; for, the Greeks called the Horoscope the Tenth house, Following Angles, in relation to the motion of the Primum mobile, which is from East to West, contrary to the succession of the Signs, because that Taurus follows Aries, Gemini Taurus, and Cancer succeeds Gemini: But the Arabians called them Precedent Angles, in respect of the motion of the 8. sphere, and of the Planets, which is from West to East, because that according to the consequence of the Signs, Taurus precedes Aries, Gemini Taurus, and Cancer Gemini: so that there was never any other difference observed in this point, betwixt the Greeks and Latines who followed the Arabick translation: For when any Eclipse of the Luminaries happened betwixt the Tenth house and the Horoscope, Ptolemy (lib. 2. Apotelesmat. c. 7.) bids to consider which of the Planets doth challenge unto himselfe most prerogatives in the place of the Defect, and the degree of the Horoscope; which Ptolemy and the Greeks called Angulum sequentem, but the Arabians præcedentem. But if betwixt the seventh house and the tenth (as this now doth) he commands us to observe which hath most Dignities in the degree of the Eclipse, and in the tenth house, which the Arabians termed Angulum præcedentem, but the Greeks sequentem.

According

According to which Rule of Ptolomies, wee may
 observe that Mercury is Lord of this Eclipse,
 having most dignities in the degree eclipsed, and
 in the tenth house, which is the Angle following
 the Defect. He is separate from conjunction with
 Venus, and applying to the Quartile of Jupiter, and
 Trine of Mars; he is in his detriment and in the
 Times of Mars: Saturne is neer the eclipsed body,
 and Mars in Quartile to them both. These Positi-
 ons, (notwithstanding the proximity of Mercury to
 the body of Venus) will be the cause of many vehe-
 ment, variable, turbulent, and mischievous Winds,
 Thunder, Lightning, and Coruscations, sudden
 Showes of Raine or Hail, and tempestuous wea-
 ther: This Eclipse is also the fore-runner of ma-
 ny Robberies, Rapes, Thefts, Depopulations,
 Man-slaughters, Lying, Usury, secret seditions and
 damnable Heresies and Schismes, distempered and
 scandalous Pamphlets and Letters: It further
 threatneth the death of fowle, much hurt to Aege-
 tables; and (of Diseases) the Cough and Phe-
 sish, Vomiting, sharp Quotidian Feavers, diffi-
 culty of breathing, and consumption of the Lungs.

Proclus affirmes, that when an Eclipse of either
 Sunne or Moon, happened in Gemini, Libra, or
 Aquarius, (this falls out in Gemini) Astronomers
 have alwaies observed great Famine, Plagues, and
 other outrageous and pestilentiall diseases to ensue
 amongst men: And he further tells us, that when
 an Eclipse is in the 8. or 7. House, (this is in the
 7th.) it portends Legum, Institucionum, Sectarumque
 mutationes, & senectæ casus, seu mors senioribus; chan-
 ges of Lawes, Statutes, or Ordinances, and
 Sects, and Mortality amongst aged men. And
 because it is in the first Decade of Gemini, it fore-
 warneth us of IncurSIONS of Enemies, and Rapes
 to be committed by them.

These Effects will continue in force for the space
 of 15. weeks, and take their beginning from the

very day and houre of the Eclipse : Constant
namque est Eclipses statim operari, & effectus suos
quousque extendere, Orig.

The Kingdomes and Cities subject here
are many, but I shall not trouble the Reader
any tedious Catalogue : Let it suffice that we
notice that the South and West parts of Eng
and especially the City of London, are therein
concern'd; for Gemini (wherein the Eclipse
happeneth, and which is so miserably afflicted
the presence of Saturne, and the Quartile of Mars
them) is acknowledged by all Autho^{rs} to be
Ascendant of London, (even by Booker himselfe
his Bloody Irish Almanack, pag 20.) and with
doubt those parts of the Kingdome will sensibly
feele the fury thereof : So shall Paris, and oth
parts of France, and Flanders, and the whole
dome of spaine; and all other places where the
eclipse is visible, the Moon being in the Signe, o^r
least in the triplicity of that Signe whereinto
Kingdomes o^r Cities are subject, and the Sun
Moones place, o^r the Signe ascending, o^r culmi
nating, the Horoscopical Signe of the City
Town. This is the meaning of Cardanus (lib.
cap. 5. Text. 26. in Ptolom.) And therefore William
Lilly does but trifle away his Inck to no purpose
whil'st he endeavoureth to terrifie the ignorant peo
ple with his senseless conceits upon Subterranean
eclipses, that concerne us not at all, nor any
where they are not seen, For mine owne part, I
ever held it the safest course to steer by the Chart
of the most approved Autho^{rs}, not my owne conceit:
Errare possum, hæreticus esse nolo.

And as upon Kingdomes and Cities, so upon
particular Persons shall the Effects of this Eclipse
be manifested, though not in the same measure : For
Eclipses luminarium super Civitates, provincias &
regna magis quàm super privata conditionis homines,
aut etiam super Reges, respiciunt enim multitudinem.

Notwithstanding

see Booker in
June the

of the effect
of the eclipse
of the moon
19th of Nov.

Wharton, 1648.

withstanding it will be very perilous and of-
fensive to all such men or women, whether Princes
or Peasants, in whose Nativities the Moon hap-
pened to be in, or near the 9. Degr. of Gemini or Sa-
corius, or who had the 19. Degr. of Scorpio ascen-
ding, the 12. Degr. of Virgo culminating: For all
such as had the Moon so placed in their Genitures,
shall be more subject to the working of the influence
of this Eclipse than any other; and the Effects are
likely in one manner or other to be shewed upon

to be known a Female of incomparable worth, who
was the Luminaries in the 4. and 9. Degr. of Sa-
corius, and the 8. Degr. of Virgo ascending in her
Geniture.

And we have seen a Prince too of high birth, and great
estate, who hath the 11. Degr. of Virgo ascending,
the 5. Degr. of Gemini culminating; the Sun in
the 7. Degr. thereof: And upon them (but especially
the first) will the Influence of this Eclipse be ma-
nifested, unless God in mercy avert the evil
thereby threatened:

Quod faxit Deus.

Omnis malum est infra Lunam, nox atra, procellæ
Terribiles, frigus, calor, importuna senectus,
Pauperies malefuca, labor, dolor, improbitas, mors.

Supra autem Lunam, lucis sunt omnia plena,
Nec non lætitiæ & pacis, non tempus & Error,
Et mors & senium est illic, & inutile quicquam.

Fœlix, & nimium fœlix, cui sedibus illis
Tam pulchris, & tam jucundis, tamque beatiss
Vivere concessum est, Supremi munere Regis!

The fourth and last Eclipse will be of the Sun,
upon Monday the 4. Day of December, at our 9. a
clock, 17. min. and 43. seconds in the forenoon,
yet cannot be seen of us in regard of the great South

E 3

The Digits eclipsed are 10. 24. min. 7 sec.

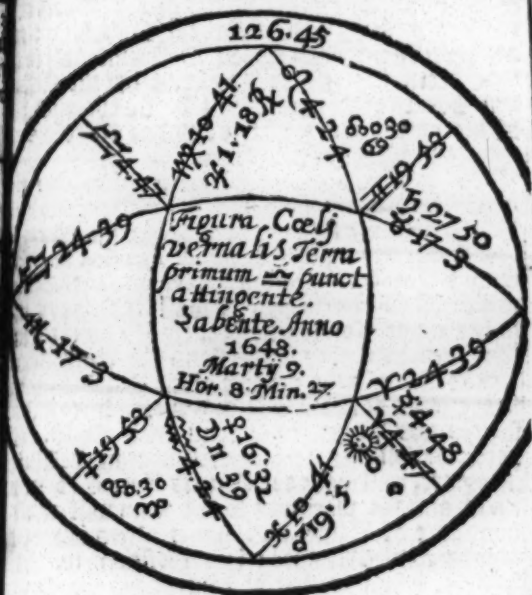

Of the Revolution of the Year, 1648,

Which is this Yeare upon the 9. day of May
at 8. a clock, and 27. min. in the Evening,
which time the Earth entreteth Libra, or (if thou
deresse) the Sun toucheth the first point of the
Equinoctiall Signe Aries, making the day and night
alike long all the world over: which either way
ken, the Heavens shall be disposed as in the follow-
ing Figure:

Wharton, 1648.

Of this Yeares Revolution.

The Prebentionall Full Moone happened upon
the 28. Day of February, at 9. and 32. min. in the
Afternoone; at which time the 20. degr. of Gemini
ascended: the Sun was in the 19. degr. 37. min.
of Pisces, the Moone in the 19. degr. 37. of Virgo:
The New Moone Postbentionall is on the 14. of
March, at 6. and 34. min. in the morning; at which
time the 1. degr. of Taurus ascends, and the Luni-
aries are in the 4. degr. of Aries. And now, ha-
ving collected the severall dignities and debilities
of the Planets at those Lunations, and at the ver-
nall ingress: I find Mercury and Mars to surpass
all

all the rest of the Planets in strength. Mercury hath more testimonies of strength then Mars; because Mars is in his triplicity at the Suns entrance into Aries, and at both the Lunations: moreover in the New Moon Postventionall in his own Terme and Face: I conceive that the Actions and Events of this yeare will be for the most part of his nature and quality; and doe therefore pronounce him Lord of the Yeare.

Si fuerit Mars in Pilce, significat multitudinem atque pluviam, & erit mortalitas in partibus meridionalibus, & capientur Pisces in revolutione illa plures solito, & dirimentur plura Regna, & significat interfecionem Regum & Magnatum & Divitum, ac Nobilium scilicet qui sunt apti Regno. I shall leave every man to his owne Construction; onely I advise them to take heed how they understand the word Regnum. His Position in the 5. house of the Revolution will be the cause of much losse and more then ordinary sorrow and labour to women with Child. The participation that Mercury challenge in the Rules of this yeare, will make the Actions thereof to be rigorous, and his proximity to the Sun will cause abundance of Raine, and much alteration of the winds and Weather: His Position in the 6. house hath signification of contentions that shall arise by the meanes of meane and ignoble persons, and deceits and treacheries of servants; and he threatneth infirmities to Infants; besides what he portends as he is Lord of the Lunar Eclipse, before spoken of, upon the 20. of November this Yeare. Saturne in the 8. house fore-shewes the death of hopes, oven, and Herpe, &c. The benigne Planet Jupiter unfortunately p-sited in the 10. house, being there retrograde, and in his detriment, tell us, Quod separabunt se Domini & Reges a populo, in quod se non facient neque bonum neque malum, & erunt inter homines jus & rixa, scilicet de utroque: & erunt cogitationes Regis in dando dignitates uni & auferendo alteri,

length. Mercury, & dando & faciendo dona, & bonum hominibus.
 when Mars; what Kings and Nobles shall withdraw them-
 the Suns comes from the People, insomuch that they shall
 nations: neither doe them good nor evill, and there shall be
 tionall in Justice and Tangling amongst men; and the
 at the Actions of the King shall be busied in conferring
 the most p... upon one and degrading another, and in
 therefore p... following gifts and doing good unto men.

Etiam si fuerit Venus in Quarta, zelabunt homines
 mulieres multum, & claudent eas, & finis illius Anni
 melior & felicius suo principio: Venus in the 4.
 use pemonstrates that men shall be very jealous
 their wives, and shut them up (like Birds in
 cages:) and that the end of the Yeare shall be
 more and happier then the beginning.

At si fuerit in Quarta Luna, & Signum fuerit infor-
 tium, erit fortiter populus obsessus, & accident ei
 merces, & anxietates graves: If the Moon be in the
 10. house, and the Signe wherein she is unfortu-
 nate, perhaps the People shall be besieged, and in-
 quiet, anxiety and griefe shall befall them.

The Position of the Sun in the 6. house fore-
 shows many Infirmities and Griefes of the eyes,
 and the death of four-footed beasts.

Saturne and the Moone are significators of
 the People: The Sonne naturally, and
 likewise accidentally, is the significator
 of his Majesty, as being Lord of the 10. house:
 at the vernal Ingresse, and at the Lunations
 hath 9. dignities, and Saturne but 8. And the
 Moone is the most unfortunate of all the Planets:
 The Sun beholds his owne house with a friendly
 eye, so does the Moone the ascendent; but Saturne
 is not: the Moone and he are in a Quartile.

I will not (rebus sic stantibus) descend to particu-
 larize the condition of each significator, and of their
 affection each to other: But this I may say, His
 Majesty will recruit apace; for the time is at
 hand, cum ——— perveniet ad pristinum suum Do-
 minium,

minium, & renovabuntur res, crescet in societate, vultus at
 mentis, & opibus, & — habebit bonum & venerabile nomen. I know what M. C. to the *Terminus* Mars means: It is not now to be feared, a fam
 woyle is past. The Peoples eyes are opened, see now where they are, and whence they have
 dered, &c. The later part of this Yeare, and the beginning of the next will produce wonders. The
 opposition of Saturne and Mars which ha pened the beginning of Gemini in Oct. 1647 is yet in
 vigour, untill the 28. of June, this Year 1648. which day there is another Conjunction of the
 Planets in the 11. degr. of Gemini; both which configurations will assuredly be very ominous to some
 parts of England, & especially to the City of London, and mightily augment the effects of the Lunar
 eclipse before mentioned: For they have signification of much wangling and hatred, of pestilence & great
 mortality, especially amongst aged men; many Thefts, Robberies, & deceitful dealings, and of many
 unjust and unreasonable taxes to be imposed upon severall specious pretences: I say again, as once
 I did before in *Bellum Hybernica*: You Judges, Officers, and Magistrates, who have betrayed or
 forsaken your Oath, and perverted the Law to serve your owne wills, expect to render an Account
 of your Actions; I unfainedly protest you are all strongly threatened: From the Sun and Mercury
 expect your comfort, or none, &c.

In the Conjunction of Saturne and Mars, June 28. 1648. the Regall Signe Leo culminates the
 Sun who is Lord thereof, and Venus and Mercury are in the 9. house of the Figure, and Jupiter posses
 seth the Mid-heaven. The Conjunction happens in the 11. degr. and 8. min. of Gemini (the Ascen
 dent of London) and in the 8. house, which is the house of Death, Labour, Sadnesse, and Heritage
 of dead men; and Mars is Lord of the Ascendent: for (at London) the 3. degr. and 29. min. of Scorpio
 ascends

ate, velle
& vener
Cernu
d, a fam
ned, m

to governe, &c.

And although Lilly delude the World with such
impious and groundlesse conceits of his, as the
obversion of the English Monarchy, yet shall the
visions of this and the next Yeare render him a
true Lye, and no lesse then a grand Incendiary
twixt his Majesty and his People: An impu-
dent, deceitfull, malicious, and colloguing Quack,
whose only aime and constant endeavours have been
and are no other then the singering up of a few beg-
gely pence (out of the purses of the poore and more
simple sort of People) though the enjoyment thereof
be his owne destruction. But these are not the
first nor least of Lillies absurdities and unparalleld
presumptions; and therefore I shall willingly leave
him in his Ignorance, heartily wishing That might
be found the worst of his Offences, when he shall
be called to give an account of his Actions.

F I N I S.
